

General theory of extremum and extremal problems of analysis

Prof. Vladimir Mihailovic Tihomirov (Lomonosov Moscow State University, Russia)

Main principles and phenomenons in the theory of extrema: The Lagrange principle for necessary conditions; The duality principle in Convex Analysis; Application to concrete problems of approximation; Approximation of an individual elements by a fixed tool of approximation; Problems on derivatives of polynomials; Landau-Kolmogorov-type inequalities on the line and the half-line.
